

XRP Top/Bottom Indicator Start Here

Version v1.4.4

Use this first

This sheet is for the first 10 minutes, the first week, and the first month. Run the XRP workflow on BITSTAMP:XRPUSD, 1W, regular candles; keep the plan inputs honest; and review decisions only after the confirmed weekly close.

Indicator page: AZRO Systems - XRP Top/Bottom Indicator (Invite-Only)
Product / access page: AZRO Systems Gumroad
Support: support@azrosystems.com

Default operating model

The sanctioned base workflow

Use BITSTAMP:XRPUSD on 1W regular candles. Keep Weekly Plan on. Start with the shipped dashboard surface, enter the plan inputs that match the real account, review DO NOW after the confirmed weekly close, then record the week in the Weekly Strategy Tracker.

Your first 10 minutes

Step	What to do
1	Confirm invite-only access on the correct TradingView account.
2	Open BITSTAMP:XRPUSD on the 1W timeframe using regular candles.
3	Add the indicator and keep the starting defaults intact until the first clean review is complete.
4	Confirm Weekly Plan is on and enter Weekly budget, Start cash, Start XRP, Start XRP avg cost, Plan mode, Safety pace if used, and Start year / Start month / Start day.
5	Create the alert stack you will actually use: MAJOR TOP, RADAR TOP, MAJOR BOTTOM, one weekly-plan path, and optional RADAR BOTTOM.
6	Have the Weekly Strategy Tracker ready before the next confirmed weekly close.

Your first week

- Treat quiet weeks as normal. The product is a weekly plan and risk-management layer, not a constant-message feed.
- Do not change Plan mode, Safety pace, budget, or starting balances just to match recent history. Stable inputs are part of the discipline.
- If health notices, wrong-chart warnings, wrong-timeframe warnings, or paused confirmations appear, fix setup before trusting the dashboard.
- Keep the routine narrow: BITSTAMP:XRPUSD, 1W, regular candles, one plan, one alert stack, one tracker.

What is normal vs what needs attention

Normal	Needs attention
No new label on many weeks; DO NOW can be HOLD; Weekly Plan may show no action on quiet weeks.	Wrong chart, wrong timeframe, missing health notice review, changed inputs without a new Start date, or alerts that were not recreated after an update.

First month priorities

- Learn the signal ladder before adding automation. MAJOR and RADAR are the serious layers; LIGHT and RISK are optional context layers.
- Use one weekly-plan alert path: WEEKLY PLAN ACTION for dashboard review, or Any alert() function call for the exact weekly order amount on action weeks.
- Use Safety mode only if the written plan prioritizes earlier staged cash extraction over the default profit-first profile.
- Keep custody, exchange, tax, and execution decisions outside the indicator. The indicator is non-custodial decision support.
