Quick start guide

Setup steps for the AZRO Systems XRP Top/Bottom Detector (v1.0.9).

What this is

An invite-only TradingView indicator for XRP that places cycle-oriented on-chart labels and supports alerts. It is built to help you confirm conditions near market extremes and reduce screen-watching.

Before you start

- You need a TradingView account (and your TradingView username).
- Purchase on Gumroad, then email support with your TradingView username and Gumroad receipt/email.
- Access is invite-only: we add the script to your TradingView account after verification.

5-minute setup

- Open XRPUSD and set the timeframe to 1W (weekly).
- Add the indicator once access is granted (invite-only script).
- Turn on the core alerts: MAJOR TOP and MAJOR BOTTOM (weekly-close confirmations).
- Optional: enable RADAR and RISK overlays if you want additional context.
- Use labels + alerts to follow your written plan (position sizing, exits, risk limits).

Alerts fire according to TradingView settings and your plan tier. Webhook alerts require a compatible TradingView plan.
