

BTC Operating System Weekly Close Checklist

Version v1.1.1

Use at the close

The job at weekly close is not to predict. It is to compare the confirmed dashboard state with the written playbook you already decided to follow.

Indicator page: AZRO Systems - BTC Operating System (Invite-Only)
Product / access page: AZRO Systems Gumroad
Support: support@azrosystems.com

Chart and data health

	Checklist item
☐	BTC chart is BITSTAMP:BTCUSD on 1W with regular candles.
☐	The indicator is loaded with the intended chapter settings.
☐	No unresolved setup, chart, future-start, limited-data, or safe-status warning is being ignored.
☐	Live alerts, if used, still match the active chart and current settings.

Dashboard review

	Checklist item
☐	ACTION and the suggested amount have been read on the confirmed weekly close.
☐	Strategy, Risk level, Weekly budget, Cash at Start date, and Start date still match the written policy.
☐	AZRO BTC-eq versus Auto BTC-eq and the extra sats delta have been reviewed as accountability, not as emotion bait.

Execution and recordkeeping

	Checklist item
☐	Execute, hold, or wait according to the written policy; do not improvise from headlines.
☐	Record the week in the Companion Tracker.
☐	Note any override, deposit, withdrawal, or chapter restart separately.
☐	Keep custody and exchange actions separate from the indicator. AZRO is non-custodial decision support.

Restart the chapter when

- Weekly budget changes materially.
- Cash at Start date or BTC already owned no longer reflects the written plan.
- Strategy or Risk level changes from the policy you meant to test.
- You are trying to reinterpret old results after changing the plan.

Best default

If the plan changed, start a new chapter instead of rewriting history. Clean chapters are easier to trust later.
